STT 811

In-Class Assignment 1

1. In the orders data, what command would create a copy of the orders where the ShipVia field is 1?
    a. low_ship <- sqldf("SELECT * from orders
            WHERE ShipVia = 1")
2. In the orders_detail data, calculate the average unitPrice for each productid.
    a. order_summary <- sqldf("SELECT productID, avg(unitPrice)
            FROM order_details
            GROUP BY productID")

3. Now, looking at every dataset, write out a "join map" which shows which fields are common between pairs of datasets.
